

ABSTRACT

A method for manufacturing a sheet-shaped body 1 in which a powder particle layer 12 is sandwiched between a base sheet 10 to which a bonding agent is applied and a covering sheet 11 so as to be bonded into an integral body, is provided with the steps of: shifting the base sheet 10, the powder particle layer 12 and the covering sheet 11, with each of the sheets and the layer being held on the respective roller face, and after the powder particle layer 12 has been transferred onto the base sheet 10, bonding the base sheet 10, the powder particle layer 12 and the covering sheet 11 into an integral form. Thus, the powder particle layer can be fixed to a predetermined position in a stable manner.
